TOP 6

Cool New Features in Oracle R13 Maintenance and Installed Base Cloud

An integrated asset management system is fundamental for organizations that are heavily dependent upon physical assets in the manufacture or delivery of their products. Inspirage has deep knowledge in managing assets both within the four walls of your facility and in your installed base.

1 Create Maintenance Organizations

To avoid the challenges of master data duplication and synchronization common to 'add-on' maintenance solutions, Maintenance extends the existing Oracle Cloud ERP and SCM data model to support additional maintenance-specific master data.

2 Manage and Execute Supplier Operations

With this release, the maintenance manager can use the Manage Supplier Operations page to manage all the supplier operations including serial-tracked assemblies.

3 Collaborate with Stakeholders Using Oracle Social Network

Resolving issues requires effective collaboration on a communication platform that provides the right context, history and tools and connects in real-time with internal and external partners.

Number 4

Maintain and Optimize Process Capability

Maintenance Cloud makes it easy to setup and maintain the supply chain process. It simplifies the setup of basic features of maintenance, inventory and cost management components.

Number 5

Integrate Installed Base to Enterprise Contracts Cloud

Maintenance Cloud provides the ability to define and maintain assets across the enterprise using maintenance processes that are consistent and repeatable.

Number 6

Use Web Services to Manage Data

Oracle's IoT solution helps enable devices to send data to the cloud and integrate with your enterprise applications. Look at the Fleet and Asset Management modules to digitize your supply chains.

OTHER COOL NEW FEATURES

- Create and Manage Purchasing Documents
- Visually Design Maintenance Work Definitions
- Upload Data Using Spreadsheets
- Procure, Build and Import Assets
- Embedded Analytics
