

ORACLE FUSION TRANSPORTATION INTELLIGENCE

KEY FEATURES AND BENEFITS

- Configurable dashboards with user-defined transportation performance metrics
- Ability to monitor transportation metrics against business targets, benchmarks, and forecasts
- Role-based alerting to ensure the right personnel are notified of exceptions and deviations from plan
- Drill down from a metric into supporting shipment data to pinpoint trouble spots
- Ad-hoc querying and reporting of your logistics information
- Direct access to performance metrics when making operational decisions such as carrier selection and tender.

Effective decision making is vital to the success of any logistics organization. Oracle Fusion Transportation Intelligence, Oracle's transportation-focused business intelligence solution, promotes better supply chain decisions by providing greater insight into both internal operations and trading partner performance. Oracle Fusion Transportation Intelligence provides you with the information needed to understand what's happening in your business so you can achieve your organizational goals.

Performance Management

Setting and tracking goals within your transportation organization is a key in reducing costs and improving customer service. Oracle Fusion Transportation Intelligence (FTI) leverages detailed and extensive transportation information to enable real-time action and historical analysis of key factors affecting your logistics network. FTI provides a mechanism to monitor key performance indicators while also allowing seamless navigation between historical and operational information. From an operational point of view, FTI also allows planners to utilize historical carrier performance data to make decisions on current orders and shipments.

With user-friendly and easily customized screens, FTI provides actionable insight that helps ensure the right decisions are being made.

BENEFITS

- Increases the value of existing transportation data.
- Obtain a single, consistent view of transportation information
- Provides transportation metrics on which to measure performance and base operational decisions
- Promotes effective decision making at multiple levels of the logistics organization
- Delivers insight that predicts the best next step, and delivers it in time to influence transportation operations
- Respond faster to logistics opportunities and threats
- Raise awareness of the impact of logistics on the overall success of the business
